Did You Know . . .

L-CBF connects crop fertilizers to soil biology?

BOOST alfalfa trials yielded as much as 28% and achieved +12 more points on Relative Forage Quality.

QLF Agronomy manufactures L-CBF (liquid carbon based fertilizers) - a combination of balanced crop nutrients with complex carbon sources. QLF’s Soil Nutrition Solutions feed soil biology and enhance plant nutrient availability.

L-CBF products provide an energy BOOST. Readily available carbon is critical for the growth and health of soil microbe populations, as well as populations of small soil animals, all of which work symbiotically to directly support the health and productivity of the soil.

There are more living organisms in a handful of soil than there are people on earth. In just 1 gram of healthy soil there are 1 billion bacteria, 3 miles of fungi, 1 hundred thousand protozoa, and over 500 beneficial nematodes.
In 2014, L-CBF was applied early regrowth prior to 2nd, 3rd, and 4th cuttings at five sites in southern Wisconsin. Overall yield and quality improvements compared to the control were substantial - adding 1.6 more ton of dry hay and 12 more points of Relative Forage Quality.

Soil Nutrition Solutions to BOOST Your Alfalfa Program

You Can't Stop Quantity When You Feed With Quality

In 2014, L-CBF was applied early regrowth prior to 2nd, 3rd, and 4th cuttings at five sites in southern Wisconsin. Overall yield and quality improvements compared to the control were substantial - adding 1.6 more ton of dry hay and 12 more points of Relative Forage Quality.
