**SUMMARY**

**IN-FURROW APPLICATION**

Product: L-CBF 7-21-3 MKP Starter, L-CBF BOOST, Kelpak  
Crop: Dark Red Kidney Beans  
Application Timing: Planting

These pictures were taken 30” apart in a field split. Due to the accelerated root growth, the crop exhibited an overall faster and more even emergence. Plants also exhibited a stronger root structure which allows greater uptake of nutrients resulting in higher yields. This was replicated twice over an 100 acre plot which were under irrigation. Approaching L-CBF as a complete program ultimately improves soil condition and yield potential.

*Results may vary. Always perform a compatibility jar test before application.*
